

Programming Test 1

Task: Create a ReactJS page using Flexbox and present sorted data.

- Create a simple React single page application using `npx create-react-app my-app`.
- Sort the `testData.json` file by these requirements:
- Make the `sportName` values into lower case.
- Sort the `testData` arrays to have the `marketId` number value to be the highest to lowest.
- Create a page like `mockup.png` using Flexbox with its background colours.
- Present the sorted data in the number 3 divs in your own design way, use the `testData` content for each div.
- Create a responsive layout for mobile starting on a width of 375px.
- The mobile layout should change the all the number 3 divs layout using CSS so that the values of `marketId` will be inverted with the lowest to highest value. Remove the left-hand side section as well.
- Anywhere in the layout use at least one pseudo element and a pseudo class.
- Add the SVG image to header and change all the seeds colour to blue.
